

CDS: Start Here

The shortest route from these documents to a working Shopify pilot.

Start in this order

1. Read **CDS_Plain_English_Guide.pdf**. It explains the system in two pages.
2. Read **page 1 and Phase 0 of CDS_Shopify_Setup_Runbook_v0.2.pdf**. The runbook tells you what to do.
3. Open **v0.2/CDS_Adoption_Workbook_v0.2.md**. Record owners, decisions, results and evidence there.
4. **Follow the runbook in order**. Do not configure products before completing the earlier design and platform phases.

Your first milestone: complete Phase 0

- Confirm the Shopify development store and plan.
- Confirm the PIM supports the five readiness capabilities in Runbook Phase 0.2.
- Verify the CDS Reference Dictionary against its checksums.
- Decide whether to declare the small-team profile (recommended for a small team).
- Name the owners for PIM, taxonomy, dictionaries, Shopify, integration, verification and access.
- Record the decisions and evidence links in the Adoption Workbook.

STOP CONDITION

If the PIM cannot meet all five Phase 0.2 readiness capabilities, address those gaps before configuring Shopify.

Which document to use

Document	Use it for
Setup Runbook	The next action to perform
Adoption Workbook	Decisions, owners, evidence and sign-off
Full Standard	The reasoning behind a requirement cited by the runbook

Do not read the full standard cover to cover. Open it only when a runbook citation needs explanation.

After Phase 0: begin Phase 1 and design the product taxonomy on paper before configuring Shopify.
